1 Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

WeatherSensor	2
----------------------	----------

WeatherSensorDHT11	3
---------------------------	----------

2 Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

WeatherSensor	
Arduino - Weather sensor	2
WeatherSensorDHT11	3

3 File Index

3.1 File List

Here is a list of all files with brief descriptions:

WeatherSensor.cpp	7
WeatherSensor.h	8
WeatherSensorDHT11.cpp	9
WeatherSensorDHT11.h	11

4 Class Documentation

4.1 WeatherSensor Class Reference

```
#include <WeatherSensor.h>
```

Inheritance diagram for WeatherSensor:

Public Member Functions

- virtual float [getHumidity](#) ()=0
- virtual float [getTemperature](#) ()=0

4.1.1 Detailed Description

Arduino - Weather sensor.

[WeatherSensor.h](#)

The abstract class for the weather sensors.

Author

Dalmir da Silva dalmirdasilva@gmail.com

Definition at line 14 of file [WeatherSensor.h](#).

4.1.2 Member Function Documentation

4.1.2.1 virtual float WeatherSensor::getHumidity () [pure virtual]

Returns the air humidity.

The air humidity.

Implemented in [WeatherSensorDHT11](#).

4.1.2.2 virtual float WeatherSensor::getTemperature () [pure virtual]

Returns the temperature.

The temperature.

Implemented in [WeatherSensorDHT11](#).

The documentation for this class was generated from the following file:

- [WeatherSensor.h](#)

4.2 WeatherSensorDHT11 Class Reference

```
#include <WeatherSensorDHT11.h>
```

Inheritance diagram for WeatherSensorDHT11:

Collaboration diagram for WeatherSensorDHT11:

Public Types

- enum `Code` {
`SUCCESS` = 0x00, `ERROR_CHECKSUM` = 0x01, `ERROR_CONDITION1_NOT_MET` = 0x02, `ERROR_CONDITION2_NOT_MET` = 0x04,
`ERROR_CONDITION3_NOT_MET` = 0x08 }

Public Member Functions

- `WeatherSensorDHT11` (unsigned char `dataPin`)
- float `getHumidity` ()
- float `getTemperature` ()
- `Code` `getLastCode` ()

Private Member Functions

- `Code` `readPackage` (unsigned char *`buf`)
- float `makeFloat` (unsigned char *`buf`)
- bool `isAvailable` ()
- unsigned char `read` ()
- unsigned long `waitFor` (unsigned char pin, unsigned char state, unsigned long timeout)

Private Attributes

- unsigned char `buf` [5]
- unsigned char `dataPin`
- unsigned long `lastReadTime`
- float `lastHumidity`
- float `lastTemperature`
- `Code` `lastCode`

4.2.1 Detailed Description

Definition at line 37 of file `WeatherSensorDHT11.h`.

4.2.2 Member Enumeration Documentation

4.2.2.1 enum WeatherSensorDHT11::Code

Enumerator

SUCCESS
ERROR_CHECKSUM
ERROR_CONDITION1_NOT_MET
ERROR_CONDITION2_NOT_MET
ERROR_CONDITION3_NOT_MET

Definition at line 66 of file [WeatherSensorDHT11.h](#).

4.2.3 Constructor & Destructor Documentation

4.2.3.1 WeatherSensorDHT11::WeatherSensorDHT11 (unsigned char *dataPin*)

Public constructor.

Parameters

<i>dataPin</i>	The data pin.
----------------	---------------

Definition at line 16 of file [WeatherSensorDHT11.cpp](#).

4.2.4 Member Function Documentation

4.2.4.1 float WeatherSensorDHT11::getHumidity () [virtual]

Returns the air humidity.

The air humidity.

Implements [WeatherSensor](#).

Definition at line 26 of file [WeatherSensorDHT11.cpp](#).

4.2.4.2 Code WeatherSensorDHT11::getLastCode () [inline]

Gets the last read code.

Returns

Definition at line 100 of file [WeatherSensorDHT11.h](#).

4.2.4.3 float WeatherSensorDHT11::getTemperature () [virtual]

Returns the temperature.

The temperature.

Implements [WeatherSensor](#).

Definition at line 33 of file [WeatherSensorDHT11.cpp](#).

4.2.4.4 bool WeatherSensorDHT11::isAvailable () [private]

Return true if the device is available for a read operation.

Returns

Definition at line 40 of file [WeatherSensorDHT11.cpp](#).

4.2.4.5 `float WeatherSensorDHT11::makeFloat (unsigned char * buf)` [private]

Makes a float number from a read data.

Parameters

<i>buf</i>	The read data.
------------	----------------

Returns

The float conversion.

Definition at line 113 of file [WeatherSensorDHT11.cpp](#).

4.2.4.6 `unsigned char WeatherSensorDHT11::read ()` [private]

Reads a byte from the device.

Returns

Definition at line 81 of file [WeatherSensorDHT11.cpp](#).

4.2.4.7 `WeatherSensorDHT11::Code WeatherSensorDHT11::readPackage (unsigned char * buf)` [private]

Reads 5 bytes from the device.

1st byte: Integer part of the humidity. 2nd byte: Fractional part of the humidity. 3th byte: Integer part of the temperature. 4th byte: Fractional part of the temperature. 5th byte: Checksum.

Returns

The error code.

Definition at line 44 of file [WeatherSensorDHT11.cpp](#).

4.2.4.8 `unsigned long WeatherSensorDHT11::waitFor (unsigned char pin, unsigned char state, unsigned long timeout)`
[private]

Waits for a given state on a input pin.

Definition at line 96 of file [WeatherSensorDHT11.cpp](#).

4.2.5 Member Data Documentation

4.2.5.1 `unsigned char WeatherSensorDHT11::buf[5]` [private]

A internal buffer.

Definition at line 42 of file [WeatherSensorDHT11.h](#).

4.2.5.2 `unsigned char WeatherSensorDHT11::dataPin` [private]

The data pin.

Definition at line 47 of file [WeatherSensorDHT11.h](#).

4.2.5.3 Code WeatherSensorDHT11::lastCode [private]

Definition at line 106 of file [WeatherSensorDHT11.h](#).

4.2.5.4 float WeatherSensorDHT11::lastHumity [private]

The last humidity.

Definition at line 57 of file [WeatherSensorDHT11.h](#).

4.2.5.5 unsigned long WeatherSensorDHT11::lastReadTime [private]

The last read time.

Definition at line 52 of file [WeatherSensorDHT11.h](#).

4.2.5.6 float WeatherSensorDHT11::lastTemperature [private]

The last temperature.

Definition at line 62 of file [WeatherSensorDHT11.h](#).

The documentation for this class was generated from the following files:

- [WeatherSensorDHT11.h](#)
- [WeatherSensorDHT11.cpp](#)
